A common printer driver to support multi model MFPs and Printers

1. One common driver supports various MFPs and printers.

The same printer driver can be used to output to various MFPs and printers. Even operating various types of models, only one driver is needed for verification, and this helps to reduce the verification process.

2. Not required to upgrade the installed driver even when print to new models.

Most of MFPs and printers to be launched will support Multi-model Print Driver.

3. Provides secure print environment.

Even as a common driver, it supports Secure Print and Private Charge Print. By storing output document temporarily on the machine, it stops printing unintended data from the control panel; and while cutting down unnecessary printing, it enables diminishing the risk of exposing the document to the third parties.

4. Provides a common driver usable under Citrix XenApp™ environment.

When using ACCP (AutoCreateClientPrinter) feature under Citrix XenApp environment, the specific printer drivers for all the MFPs and printers on the network must be installed on XenApp server. However, if Multiple-model Print Driver 2 is used, installing several drivers on XenApp server will not be necessary, which helps to reduce the cost of system operational management \*1. Moreover, in combination with Print Utility for Citrix XenApp™, the configuration information for MFP and printer options is automatically reflected, which realizes the outputs by MFP and printer options that usual ACCP cannot support. Also the operation of the authentication mode will be possible.

\*1: Multi-model Printer Driver 2 must be installed on client PCs.

# Product Features

## Forward Compatibility

- Driver upgrade is not required even for a new device.

## Security & Accounting

- Secure Print, Charge Print and Private Charge Print are supported.

## Auto Device Configuration

- 'Get Information from Printer' button is available for MMD2 support devices.

## Advanced Settings

- Advanced Settings tab as supported by specific driver is available.
