

Apple Mac[®] OS X 10.15

Compatibility with Fuji Xerox Equipment

PREFACE

On October 8th, Apple[®] released OS X 10.15 for Apple Mac[®] products. Fuji Xerox offers a wide variety of print drivers, scan drivers, and software, for existing and new Apple Mac[®] products. This document outlines the support scope for OS X 10.15.

Upgrading from OS X 10.14 to OS X 10.15

For users that have upgraded from OS X 10.14 to OS X 10.15, all installed drivers and software for Fuji Xerox Printers will continue to function with the exception of some DocuPrint products. The affected products with known issues are listed later in this document.

Not Compatible with OS X 10.15

The following table identifies the products that have known issues with OS X 10.15. Existing OS X 10.14 software and drivers may continue to be used for basic print functions, however new packages are required to gain full functionality of the product.

NOTE: ApeosPort and DocuCentre series products are unaffected. Please update to the latest available driver.
